

Thank you for purchasing the waterAlarm™ from Control Products. Control Products has been making quality temperature and environmental control products since 1985.

APPLICATIONS

The waterAlarm™ senses moisture and activates a local, audible alarm. On the Deluxe waterAlarm (model WA-10), there is also a set of contacts that close when the alarm has detected moisture. This can be used to activate a remote monitoring device similar to Control Products' *Deluxe FreezeAlarm*. The Deluxe FreezeAlarm can dial up to three telephone numbers when moisture is detected and play a message specific to a water emergency.

FEATURES

- Activates upon sensing water.
- Powered by 9 volt alkaline battery (not included)
- 85db alarm sounds for up to 36 hours on a fully charged battery.
- Convenient self-test button
- Sensor may be placed 5 feet from unit.
- Low battery indicated by intermittent beep from alarm.
- Connection to a monitoring device via 12" leads (WA-10 only).

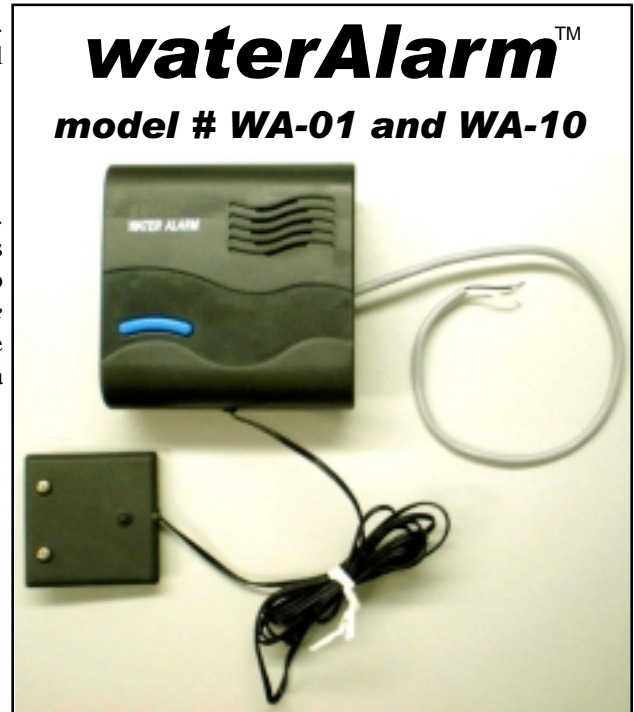

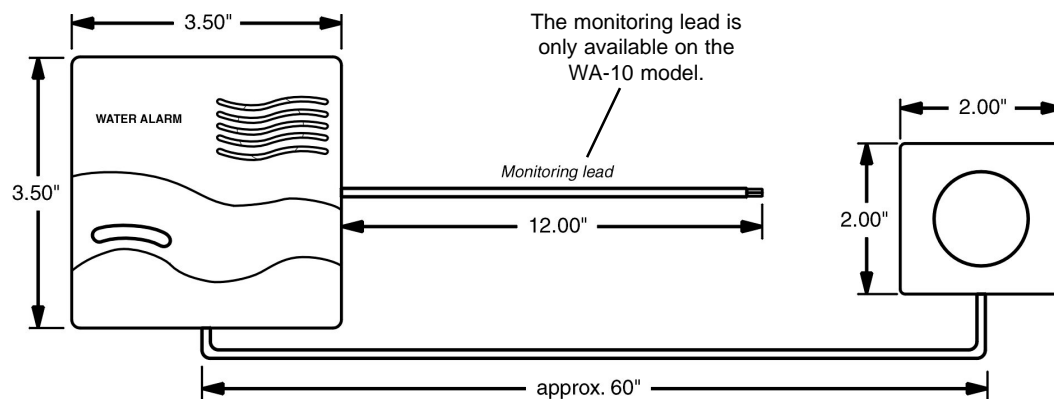

OPERATION

For Stand Alone Operation (WA-01 or WA-10)

1. Remove the 2 screws from back of unit and remove back cover. Attach a 9 volt alkaline battery (not included), being sure to press the clips firmly in place. On WA-10 models only, you can remove the twist tie on the gray cable and extend through the hole in the side of the unit. Leaving this cable hanging freely does not affect the operation of the waterAlarm as a stand alone water detection device. Re-assemble.
2. Press and hold the blue test button down for two seconds and the alarm will sound. If it does not sound, check battery connections.
3. For **Leak/Flood Detection**, place the sensor (suction cup up) at the lowest point on the floor or other horizontal surface where water collects.
4. For **Unattended filling of pools, spas, etc.**, use the suction cup to attach sensor to smooth vertical surface. Buzzer will sound when water reaches both metal contacts on the sensor. The contacts on the monitoring lead will also "close".

For Operation with a Remote Monitoring Device:

1. Set up the waterAlarm™ as indicated above.
2. Connect the monitoring lead wires to the monitoring device. When moisture is detected, the waterAlarm™ will close the contacts on the monitoring lead. NOTE: The relay that closes the contact on the monitoring lead opens and closes in the same pattern as the alarm beeps. When water is detected, the alarm will beep, thereby opening and closing the monitoring lead rapidly.

CONTACTING US

Control Products, Inc.

Model Number Information:

The model number of your unit is either a **WA-10** or a **WA-01**. When calling or writing for customer support or service, it is a good idea to have the model number and the date code/MO# printed on a label on the back of your waterAlarm™. Write it down now for reference:

Custom Design and Modifications:

Since 1985, Control Products, Inc. has been designing and manufacturing unique, exciting and technologically advanced electronic control circuits for both commercial and consumer use. We can modify one of our many standard products or our in-house engineering staff and state-of-the-art manufacturing can build a project from the ground up. Please contact our customer service department to arrange a personal visit from one of our representatives, posted in facilities throughout the United States or visit our web site at www.controlproductsinc.com.

Related Products from Control Products:

Deluxe FreezeAlarm™. The Deluxe FreezeAlarms™ (models FA-D and FA-DX) have a set of dry contacts that are monitoring for a closed contact. When the waterAlarm™ is hooked up to these contacts on a Deluxe FreezeAlarm™, the presence of water by the waterAlarm™ will trigger the FreezeAlarm™ to dial out to up to three telephone numbers and warn with a voice message that there is a water emergency. The Deluxe FreezeAlarm is just one of several freeze protection devices that are used to monitor the temperature and power status in a home, cabin, lake property or business. The FreezeAlarms call you before your pipes freeze. The Deluxe model also allows you to call up and remotely turn on or up the heat with a phone call. Control Products also offers a full line of security products and other convenience products for the home.

WARRANTY

Control Products, Inc. warrants its products to be free from defects in material and workmanship under normal use for a period of one year and is not responsible for consequential damages or installation costs of any nature. Exposure to contaminants and extreme environmental conditions such as moisture, temperature, chemicals, etc. may cause the unit to degrade or fail. Control Products accepts no liability for product applications or customer application testing. We are also not responsible for any incidental or consequential damage to your person, property, or some other person or that person's property with the use of this product.

This warranty shall terminate and be of no further effect at the time the Product is 1) damaged by extraneous causes such as fire, water, lightning, etc., or not maintained as reasonable and necessary; 2) modified; 3) improperly installed; 4) repaired by someone other than the Warrantor; 5) used in a manner or purpose for which the Product was not intended.

WARRANTORS' OBLIGATION UNDER THIS WARRANTY IS LIMITED TO REPAIR OR REPLACEMENT OF THE PRODUCT ONLY. THIS WARRANTY DOES NOT COVER PAYMENT OR PROVIDE FOR THE REIMBURSEMENT OF PAYMENT FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES.
