Protected Home Introduces the FreezeAlarm™ FA-700 At the National Hardware Show In Las Vegas

Minneapolis—May 5th, 2010—Protected Home, the leader in remote monitoring products for the home and vacation property owner, is pleased to introduce the FreezeAlarm™ FA-700.

For the past twenty-five years, Protected Home has offered a diverse family of innovative products designed to protect homes and vacation properties. These products provide advance warning of possible damage that can result from frozen, leaky pipes, furnace failure, and power outages. The FreezeAlarm™ FA-700 features state-of-the-art electronics and new contemporary styling with enhanced features from our popular FA-B FreezeAlarm. The FreezeAlarm™ FA-700 will call a user programmed phone number if the temperature drops below 45° F due to furnace failure or power outage, or can be programmed to call out if the temperature goes above 85°F, preventing mildew and mold caused by a faulty air conditioner. As a result, property owners experience peace-of-mind, knowing their properties are being monitored while they are away.

“The FreezeAlarm™ FA-700 is the most affordable product on the market that incorporates protection against temperature change and power loss” according to Nikki Uick, Retail Account Manager for Protected Home, “and it requires no installation or monthly monitoring fees.”

The FreezeAlarm™ FA-700 is manufactured by Protected Home, a division of Control Products, Inc. Protected Home also manufactures other multi-featured FreezeAlarm™ models. The FreezeAlarm™ family of products is the number one selling freeze protection product line available. Protected Home also manufactures the popular WaterAlarm™ that offers protection against water damage. In 2008, the company introduced wireless sensors, making installation of its FreezeAlarm™ and WaterAlarm™ products even easier and more applicable to larger homes and business environments.

Stop by and visit us at the National Hardware Show (booth # 2432) or call 800-880-6000 for more information.

About Protected Home Since 1985, Protected Home, a division of Control Products, has been known for innovative technologies in remote monitoring and home automation. Pioneers in electronic controls and sensor technology, its products are used in various commercial and consumer applications around the world. The HomeSitter technology grew out of a commercial product designed to alert service technicians of rising temperatures in supermarket coolers and freezers. Today, it is just one of many innovative products designed and manufactured by Control Products, Inc. To learn more about Protected Home., visit us on-line at www.protectedhome.com or call 800-880-6000.
