Protected Home Introduces the WaterAlarm™ WA-700 At the National Hardware Show In Las Vegas

Minneapolis—May 5th, 2010—Protected Home, the leader in remote monitoring products for the home and vacation property owner, is pleased to introduce the WaterAlarm™ WA-700.

For the past twenty-five years, Protected Home has offered a diverse family of innovative products designed to protect homes and vacation properties. These products provide advance warning of possible damage that can result from frozen, leaky pipes, furnace failure, and power outages. The WaterAlarm™ WA-700 features state-of-the-art electronics and new contemporary styling with enhanced features from our popular WA-5001 WaterAlarm. The WaterAlarm™ WA-700 will call a user programmed phone number if water is detected. This can happen when a sump pump overflows, water pipes burst, washing machine hoses breaks or toilets overflow. As a result the WaterAlarm™ can prevent damage to building structures and contents including irreplaceable keepsakes. Finally, property owners experience peace-of-mind, knowing their properties are being monitored while they are away.

“The WaterAlarm™ WA-700 is the most affordable product on the market that incorporates protection against water damage” according to Nikki Uick, Retail Account Manager for Protected Home, “and it requires no installation or monthly monitoring fees.”

The WaterAlarm™ WA-700 is manufactured by Protected Home, a division of Control Products, Inc. Protected Home also manufactures other multi-featured WaterAlarm™ models. The WaterAlarm™ family of products is the number one selling water detection product line available. Protected Home also manufactures the popular FreezeAlarm™ that offers protection against frozen water pipes due to furnace failure or power outages. In 2008, the company introduced wireless sensors, making installation of its WaterAlarm™ and FreezeAlarm™ products even easier and more applicable to larger homes and business environments.

Stop by and visit us at the National Hardware Show (booth # 2432) or call 800-880-6000 for more information.

About Protected Home Since 1985, Protected Home, a division of Control Products, has been known for innovative technologies in remote monitoring and home automation. Pioneers in electronic controls and sensor technology, its products are used in various commercial and consumer applications around the world. The HomeSitter technology grew out of a commercial product designed to alert service technicians of rising temperatures in supermarket coolers and freezers. Today, it is just one of many innovative products designed and manufactured by Control Products, Inc. To learn more about Protected Home., visit us on-line at www.protectedhome.com or call 800-880-6000.
